

Don't just connect.  
Operate with confidence.

# What Makes a Good Surgical Telepresence System?

*Powered by*

# High-Resolution, Low-Latency Video

**Clarity and timing are everything  
in Surgery.**

Look for 4K or HD live video with  
near-zero delay.  
No buffering. No blurring. No second  
guessing.

# Multi-Source Synchronization

**Surgery isn't one screen.**

Your system should display camera feeds, PACS, EMR, and vitals—all in sync, all in view.

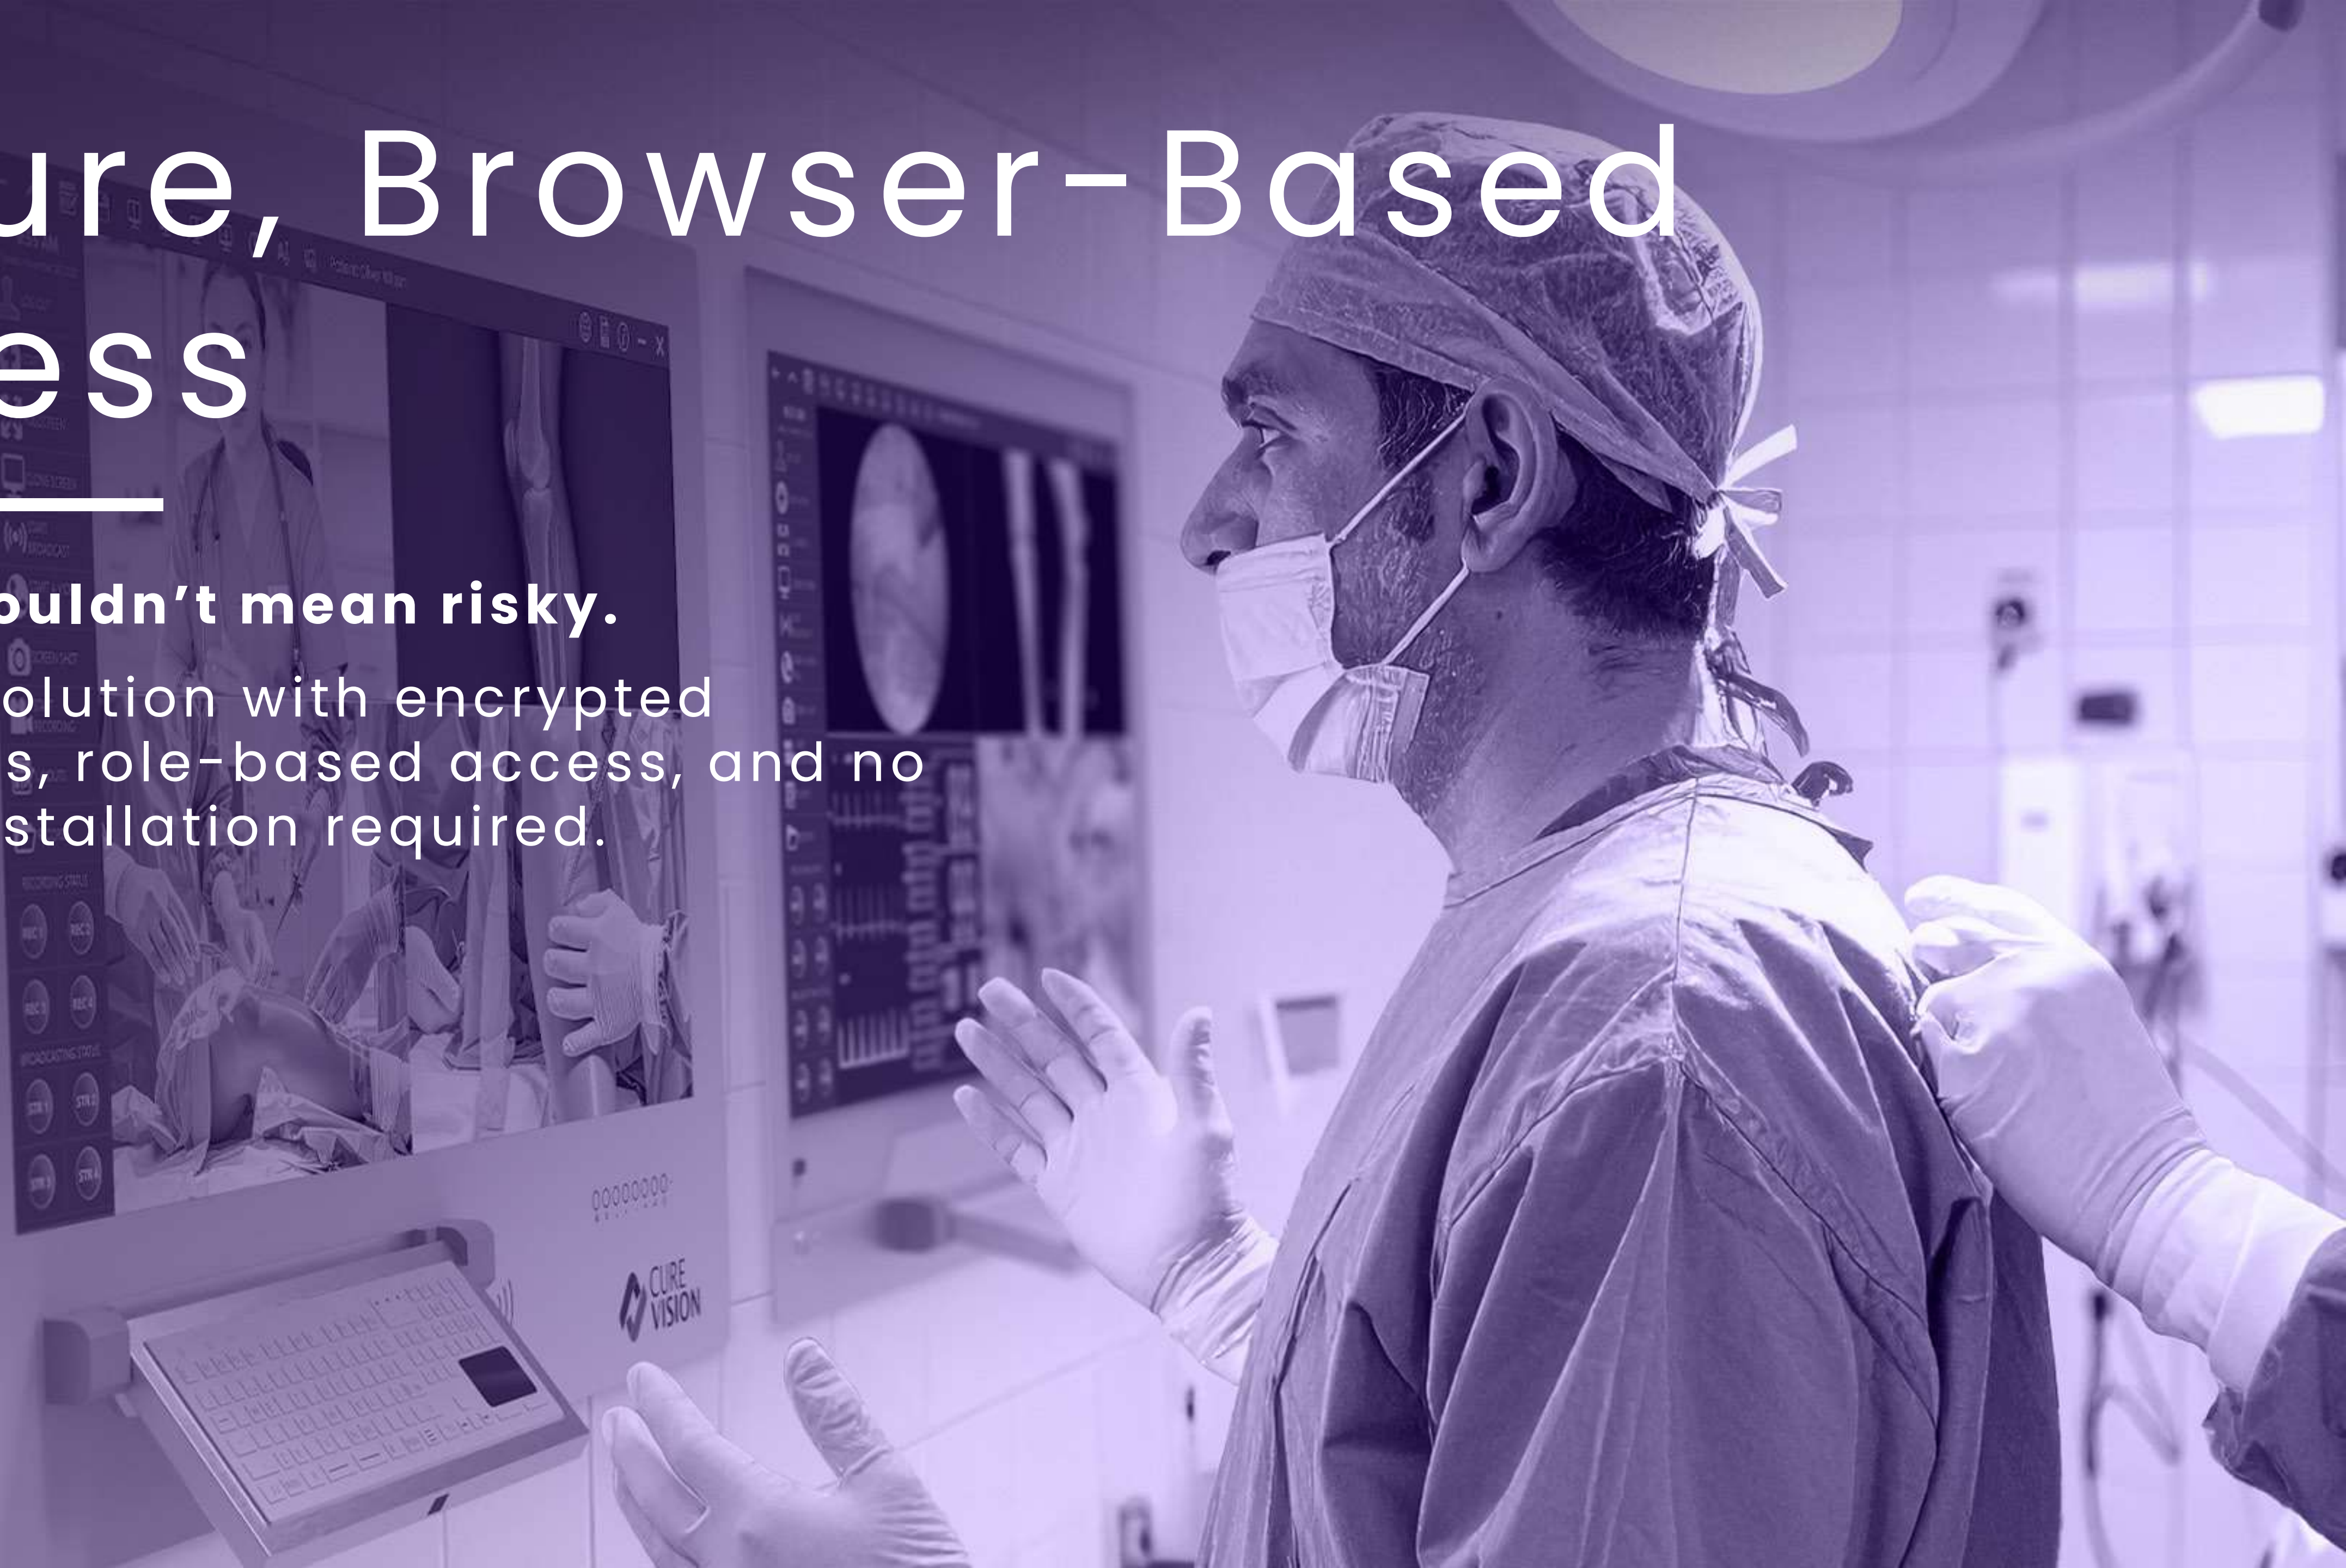

# Secure, Browser-Based Access

**Remote shouldn't mean risky.**

Choose a solution with encrypted connections, role-based access, and no software installation required.

# Two-Way Interaction

**Telepresence is not passive observation.**

True systems offer audio input, annotations, and real-time guidance—not just viewing.

# Integrated Recording & Archiving

## **Documentation matters.**

Your platform should support tagging, recording, and searchable storage that supports training, quality control, and regulatory compliance.

# Curevision Delivers All of The Above—by Design

- 4K streaming
- Multi-source interface
- Secure, audit-ready access
- Live interaction + archiving
